Lin Wang (林望)

lin.wang.demo@example.com · +86 (Not Provided) · 深圳 github.com/linwang-demo · linkedin.com/in/linwang-demo

Education

University of California, San Diego | Master of Science, Computer Science Sep 2024 – Dec 2025 (expected) · GPA: 3.7 / 4.0 Relevant Coursework: Deep Learning, Distributed Systems, Natural Language Processing

Zhejiang University | Bachelor of Engineering, Software Engineering Sep 2020 – Jun 2024 · GPA: 3.8 / 4.0 · Rank 15 / 180

Technical Skills

- **Languages:** Python (proficient), TypeScript, SQL, Go (basic)
- **AI / LLM:** LangChain, LangGraph, Pydantic, OpenAI API, DeepSeek API, RAG
- **Backend:** FastAPI, Flask, PostgreSQL, Redis, Docker
- **Frontend:** React, Next.js, TailwindCSS
- **DevOps:** Docker Compose, GitHub Actions, AWS (EC2, S3, Lambda)

Projects

PaperTalk — Academic Paper Q&A Agent (Personal Project, Aug 2025)

- Built a multi-agent RAG system with LangGraph that ingests arXiv papers and answers deep questions with inline citations
- Implemented a 3-node workflow: paper parser → retriever → citation-verifier, using Chroma as vector store and OpenAI embeddings
- Achieved 87% citation accuracy on 200 hand-labeled queries; deployed via Docker on personal server

Kanban-GPT — AI-Powered Task Breakdown (Course Project, May 2025)

- Designed a full-stack tool that takes natural language goals and decomposes them into Kanban tasks via structured LLM output
- Backend: FastAPI + Pydantic; Frontend: Next.js + shadcn/ui
- Handled edge cases in JSON schema validation with retry mechanism

Distributed Job Scheduler (Coursework, Dec 2024)

- Implemented a Redis-backed job queue with worker heartbeat and auto-retry, supporting up to 500 jobs/sec on 4-node cluster

Experience

AI Engineering Intern — Ant Group (Alibaba), Hangzhou Jun 2025 – Aug 2025

- Contributed to internal Agent framework: implemented tool-calling adapter for third-party API integrations, used by 3 downstream teams
- Wrote unit tests raising module coverage from 40% to 78%; discovered and fixed a race condition in async event loop

Software Engineering Intern — ByteDance, Shanghai Jun 2024 – Sep 2024

- Owned migration of legacy Python 2 microservice to Python 3.11 + async I/O; reduced p99 latency by 35%
- Built a monitoring dashboard with Grafana + Prometheus for on-call visibility

Highlights

- Contributed 12 PRs to open-source LangGraph ecosystem (langgraph, langchain-community)
- Passed AWS Certified Cloud Practitioner (2024)
- Winner, ZJU Hackathon 2023 (2nd place, 200+ teams)
